

Industrial Cleaning Services

Full-Service Environmental
Cleaning | Transport | Disposal

**MILLER
ENVIRONMENTAL
GROUP INC.**

Overview

Miller Environmental Group's (MEG's) Environmental Services personnel are experts in assisting customers with their environmental projects 24 hours a day, 365 days a year. Our multiple locations in the Northeast, with mobile equipment and trained personnel, can assist Facility Maintenance Professionals with their environmental needs. Commonly requested services are listed below:

- » Oil / Water Separator Cleaning
- » Acid Neutralization Tank Cleaning / Servicing
- » Petroleum Tank Cleaning & Maintenance
- » Overhead Dust Cleaning
- » Avian Waste Cleaning
- » Flood / Fire Restoration & Drying
- » Short & Long Term Remediation Solutions
- » Power Transformer Support Draining/Removal/Response
- » Glycol System Pumpdowns
- » Hazardous and Non-Haz Waste Transport & Disposal
- » Trench Drain Cleaning
- » Industrial Cleaning
- » Industrial Vacuum Services
- » Hydroblasting & Hydro Demolition (10K–55K psi)
- » Pipeline Cleaning & Video Inspection
- » Concrete Vacuum Services
- » Boiler Cleaning

Manhole/Vault Cleaning

MEG has performed Manhole and Vault Cleaning for institutional, commercial and industrial customers. We have found that the key to providing good service is to be prepared for each project and to anticipate issues that commonly come up in this environment. By having the supplemental specialty materials and equipment incorporated into our field crew, we are able to address unforeseen issues and keep our work on schedule. We have several customers that are unable to discharge water coming from their manholes/vaults/containment areas and we provide Vacuum Trucks to handle the waste water transport and disposal. If Asbestos abatement is necessary during manhole and vault cleaning work MEG has a very nimble Asbestos Abatement subcontractor that we work with directly with little to no impact to the project.

Oil/Water Separator Cleaning and Repair

MEG commonly performs Oil/Water Separator cleaning and repair for Manufacturing, Distribution and Commercial customers. MEG has extensive experience cleaning both large and small units by many differing manufacturers. Unlike most companies, MEG Vacuums out the free liquids, then proceeds to remove and drum all solids to ensure the proper operation of the Oil/Water separator. MEG disassembles, cleans, and reassembles Oil/Water Separators to help our customers regain the beneficial use of their equipment. MEG provides the Confined Space Entry & Rescue, Cleaning, Tank Inspection, and Repair Service. MEG has the ability to characterize and handle the waste water and solids transport and disposal to an approved facility.

Vacuum Cleaning Services

MEG's Industrial Services personnel decontaminate equipment and facilities of regulated and non-regulated materials on quick turnaround. Capabilities include Vacuum Enhanced Fluid Recovery, boiler cleaning, manhole prep and clearing, pipeline cleaning and video inspection, hydroblasting and hydro demolition (10K–55K psi), and concrete vacuum services. MEG has cleaned tank barges, highway tankers, rail tank cars, above and underground storage tanks, separator and waste oil tanks, conveyors, rock tumblers, and other processing structures across both marine and land-based applications.

MEG maintains a modern fleet of vacuum, Guzzler, and tanker trucks, along with high-capacity centrifugal and diaphragm pumps, hydraulic submersibles, and ancillary equipment to move virtually any material from one point to another. Specialized pumps for transferring chemicals and high-viscosity fluids are also available.

Petroleum and Chemical Tank Cleaning

MEG provides Tank Cleaning Services of any size tank (large or small) for our institutional and commercial clients. MEG has extensive experience cleaning the full range of oil products including #2 Heating Oil, Gasoline and Diesel Fuel. MEG additionally has in depth experience cleaning corrosive and additive tanks. MEG has the ability to provide turnkey service including Confined Space Entry & Rescue, Tank Cleaning, Tank Inspection, Repair Service and any Coating/Painting work can be quoted as one project. MEG will characterize and provide the waste/wash water transport and disposal to a licensed facility.

Waste Transportation and Disposal

MEG operates a very safe Transportation Fleet with highly qualified CDL drivers. MEG personnel are fully trained and equipped to characterize, package, label, and manifest waste materials both Hazardous and Non-Hazardous in nature. MEG safely transports over 9.4 million gallons of liquid waste and over 900,000 tons of solids per year in both a drum and bulk capacity. We have a very large fleet of Vacuum Trucks located in between the operations centers that would service each customer. A request for (10) Vacuum Tank Trucks is not uncommon for MEG to meet on very short notice. Our limitations are typically the CDL Driver Hours of Service rules and MEG has several techniques that we employ to ensure that we have the personnel available during periods of high demand. MEG has designed a number of unique DOT specified Vacuum Trucks that allow us to increase the volume transported and at the same time operate in a safe manner.

Environmental Support Services

MEG currently provides Environmental Support Services for a wide variety of our customers. When a capital improvement project is ongoing and multiple contractors are performing services on a site, our Supervisors and Project Managers can monitor all the key metrics that keep a project safe and within company protocol for a standard of care. Our team has the tact and approach that will diffuse any tension and get to a resolution in coordination with the customer to abate any incident or accident on a project.

Decontamination/Demolition/ Site Preparation/Excavation Services

MEG has completed significant Demolition projects for our customers. We directly coordinate with the Scrap Recycler to separate all common materials ensuring that our customer receives the direct benefit of all scrap from our projects. We have performed Tank Demolitions and Small Building Demolitions. We have also performed multiple substation demolition projects in which we were able to return whole substations back to a natural state. We have provided significant savings through our approach and planning for each project.

Prepared for Tomorrow.

We work with **40+ different industries** including big-box retailers, healthcare & pharma, food manufacturers, schools & universities, utility & petroleum companies, railroads and government agencies.

Our dedicated personnel of several hundred strong spans across the nation, utilizing the **best in class equipment and technology** for a seamless customer experience.
